

Quality Testing Laboratory

Thickness tester

Thickness tester is used to measure the thickness of poly film in Microns.

Universal Tensile tester

Universal tensile tester is used to measure Tensile properties like Tensile strength, Elongation, Seal strength, Coefficient of Friction, Loop tack test and Tear test.

Opacity tester

Opacity tester is used to measure Optical properties like Transperency and opacity of poly film.

Falling Dart impact machine

Falling dart impact machine is used to measure dart failure value of poly film in Grams

Scuff resistance tester

Scuff resistance tester is used to measure ink adhesion strength on printed poly film.
