## A breakthrough in evidence collection-Tamper Evident Envelopes/Bags from Dynaflex

Share | Tweet | +1 | Like

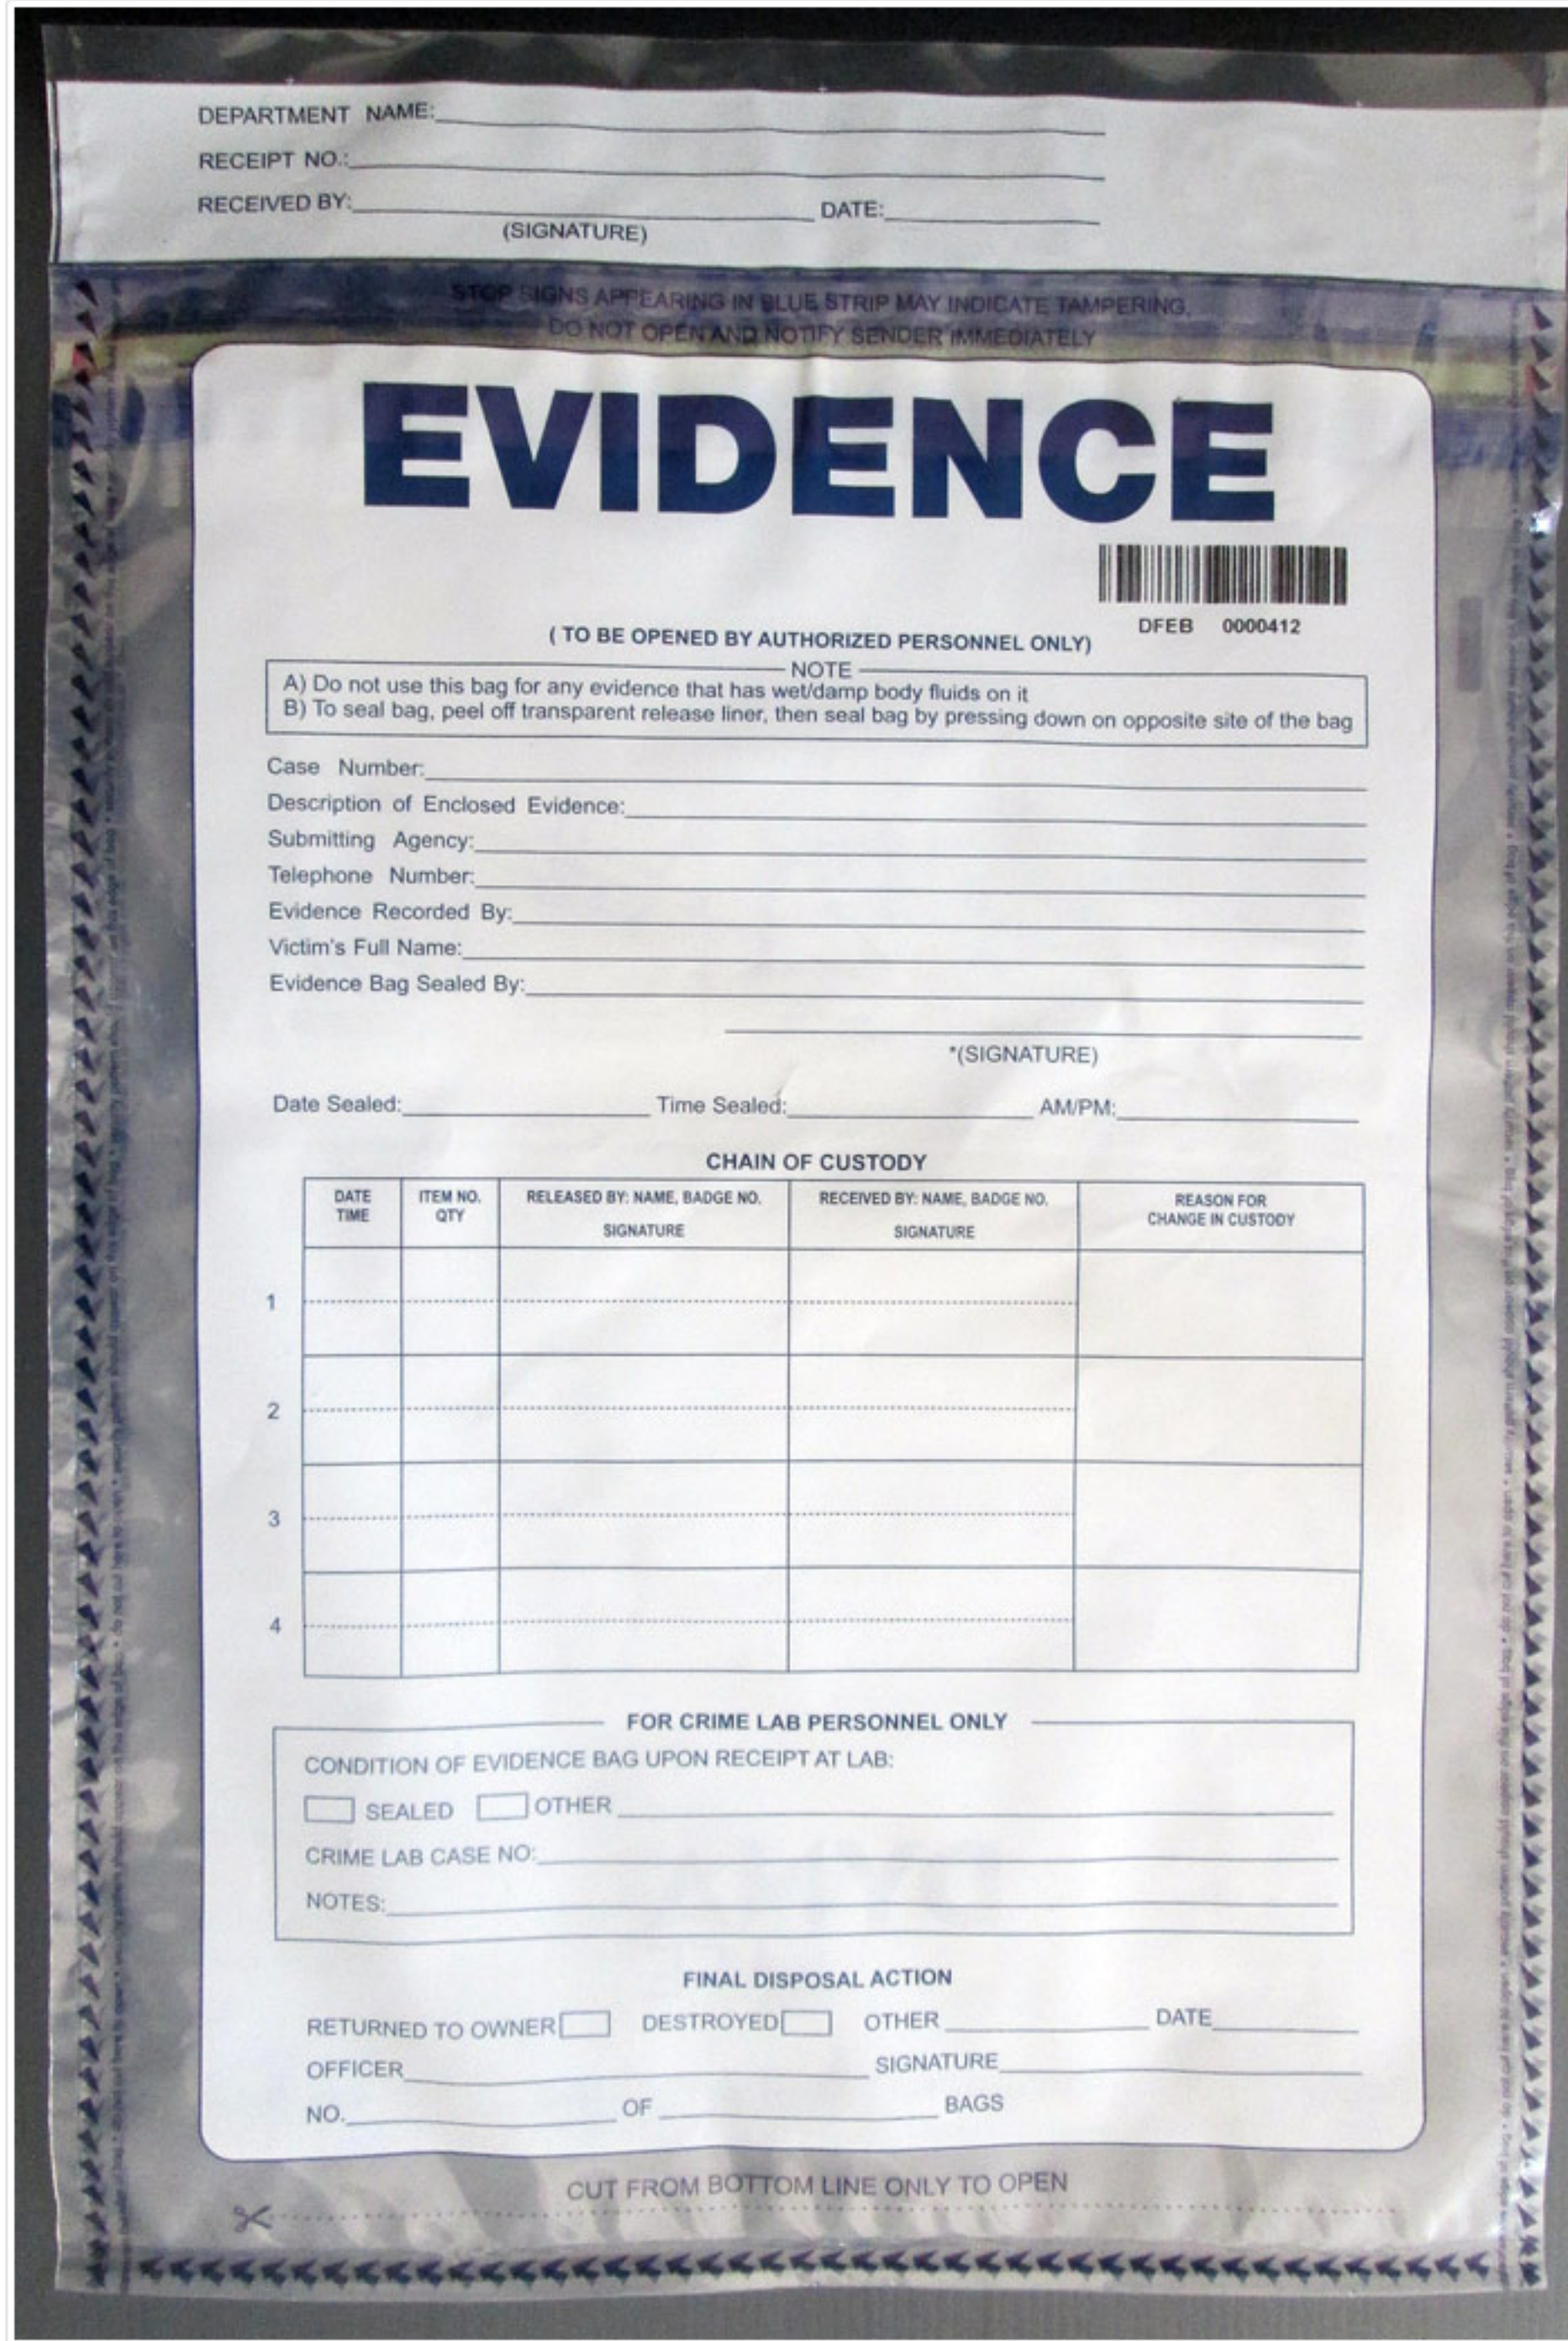

Vadodara, 15th March, 2014: As we all know most criminals escape from being sentenced due to evidence tampering. To counter this, a company in India has launched in India which is already being used by Abu Dhabi Police, Dubai Police. Dynaflex is going to launch the same in India.

The specialty of these tamper evident envelopes/bags is that, if somebody tries to tamper by heating, cooling or using a solvent, it leaves an irreversible mark. What makes the product unique is the provision of bar-coding/sequential numbering helping to trace the contents and the chain of custody details printed on it, helping to keep the records intact.

It is however often observed that the law enforcement agencies use paper bags, cloth, ordinary plastic bags to collect the evidences from the crime scene. The reason is absence of awareness on scientific evidence collection bags and availability of collection bags which are a global standard. As a result the evidences which are of (physical, chemical or biological nature) either get contaminated with other substances. On a serious note, there are even chances of them getting tampered as well resulting into a great damage to the case.

Speaking on the occasion, Mr. Gaurav Vora, Director, Dynaflex Pvt. Ltd., a visionary behind development of tamper evident line up in India says, "After years of extensive R & D, we have developed this technology, which leaves an irreversible proof of tampering. The export demand has been overwhelming and with such products, our motto is to significantly reduce the no. of case dismissals on account of inferior form of evidence preservation. The company is already in talks with Indian Agencies like CBI, Central Forensic Laboratory and state polices across India for supplying these products".

Globally, not many companies manufacture high security tamper-evident bags and envelopes, which are used for evidence collection. Dynaflex happens to be one among them. The infrastructure required to assure the reliability is difficult in terms of machinery, standards, people and technology. In a country like India, tampering with evidence in chain of custody is a common sight leading to delay in justice; these products are a breakthrough in evidence collection. In addition, the company also sees huge potential in sectors such as defence, paramilitary forces where confidential docs/reports are in transit.
