

Flexo Wash installs cleaning units at Dynaflex, India

One of the oldest flexo printers in India, Dynaflex, has had a FW Anilox Roll Cleaner and a PW Plate Washer installed at their facilities in Vadodara.

Since 1985 the company Dynaflex has been printing flexo and this year they took another step to improve the printing quality and invested in cleaning equipment for their aniloxes and printing plates.

After seeing how easy the machinery was operated and the agent's recommendation, they had a FW 2500M Anilox Roll Cleaner and a PW 82 WRO Plate Washer installed and already from day 1 the company has seen a change in the cleaning result. When asked about the satisfaction with the machines Director of Dynaflex, Mr. Gaurav Vora said: "The machines are very easy to use, and there has been a visible difference post cleaning."

All Flexo Wash units are working with Eco-friendly cleaning liquids and high pressure water and after the installation Mr. Vora says: "We already feel that we save both time and money during start up and running of new jobs. Having clean aniloxes helps to reduce to waste of ink and substrate when changing jobs. To be honest I was surprised by the ease of operation and the performance of the machines. We are very happy with them!"
